In Touch with Tomorrow

**TOSHIBA**

There's more to it than meets the eye.

# Everything is a test of quality.

**Take it from Toshiba.** Nothing worth winning is ever won easily. Especially when it comes to quality. As we strive to perfect our range of high-performance power notebooks, quality means plain hard work. But it also means a constant search for the right ideas. The ambition to strive for continuous improvement. The drive to provide technical solutions that are not simply new and spectacular, but actually make a difference to the user's way of life and work. And not just today and tomorrow, but in the future too. Of course, achieving these goals isn't something that can be done in a day. It's about a whole range of skills and actions coming together.

**The Right Experience.** The search for enduring quality starts with the challenge to go one step further every day. That's exactly what's driven Toshiba for the last 12 years. And that's precisely why we are the world market leaders in mobile PCs. At Toshiba, "In Touch with Tomorrow" is more than just our company motto – it's our corporate philosophy.

**The Right Service.** Our single-minded focus on quality translates into a number of customer benefits. It means for instance, that you can rely on our standards right down to the smallest detail and on our smallest accessory. So whether you want to expand your notebook memory or purchase a special PC Card – we can provide you with the service or options you need. There's not only a choice of every conceivable option, you can also be sure that every component embodies the wealth of experience you'd expect from the world's leading mobile PC manufacturer. And of course you can also be sure that every component is totally compatible.

**The Right Dealer Network.** Sometimes even the best machine doesn't run as it should. But even then, the quality shines through – because with a Toshiba there's no need to run around looking for someone to fix it. Thanks to our comprehensive dealer network, there's always a service support centre nearby. So you'll be able to get all the advice and assistance you need in a fast and friendly manner. And of course they're also on hand to help you choose the right options to update or expand your current notebook.

**The Right Guarantee.** We are always true to our word and back our promises with guarantees. Because our brand is a symbol you can trust.

**OPTIONS**

**TOSHIBA**

If you need more, you should get more.

# Everything to increase capacity.

## 2nd SelectBay/Internal Hard Disk Drive.

For those with a big data appetite, here's something really meaty. Anyone who works with a large number of multimedia applications or large databases will soon recognise that a Toshiba-built hard disk drive is something to savour. And it's simple to install or detach either in the SelectBay (via the SelectBay adaptor) or internally!

## PC Card Hard Disk Drive.

520 and 1,040 MB packed into a credit card format, the PC Card HDD is an ideal back-up data transfer device. Plug-and-Play makes it simply child's play to install. Just slot the HDD into the PC Card Type III slot on your notebook. Comes with a protective wallet.

## Memory Expansion.

Why take chances, when you can have a guarantee? Each of these models has been tested by Toshiba's own development teams, that's why they come with a lifetime guarantee. Frankly, there's nothing worse than a memory expansion unit that has problems keeping up with the quality of your Toshiba notebook. What's more, modern operating systems transfer data onto your hard disk when your stop memory runs out. The memory swap and re-loading takes time and of course uses power. Additional memory speeds up your work and helps to conserve battery power – good news for you.

## Select Bay Zip Drive.

Safe and easy data exchange with the economic 100 MB Zip drive. This standard media is the benefit you get with the new SelectBay Zip Drive. With a data rate of 1.4 MB/s it is 400 times faster than the Zip parallel port solution! With its practical housing for the SelectBay it is the "clean" solution, no more tangled cables and bulky adaptors.

Planning to make it to the big time – here's the route and all the stations along it.

# Everything for rapid expansion on the desktop.

## Card Stations.

Add an extra dimension to your notebook; the Toshiba Card Stations offer the comfort and productivity gains of lightning fast connections to all your office peripherals. Printer, mouse, monitor, or external keyboard – one touch and your notebook is hooked up to everything. 2 PC Card Type III slots open up the options of yet more PC Cards in the office – and the Card Station II and III are CardBus-ready. And so that you've got all the connectivity you'll need for the future, you can link USB peripherals to the Card Station III.

## Desk Station V Plus.

Expand your notebook into a fully-fledged desktop. We haven't got room here to give you a rundown on all the refinements of the Desk Station, so here's just a glimpse of what's on offer: PCI/ISA slots, a built-in SCSI interface, 2 additional PC Card slots, built-in stereo speakers, slots for optional drives – and that's just a few of the highlights. Naturally you can add a full-size keyboard and an external monitor.

## Mini Card Station.

Even the smallest notebook has the right to grow and develop. The Mini Card Station turns the Libretto into a fully-functional work station with connections to an external monitor, PS/2 keyboard, mouse, printer and even a PC Card Type III slot.

### Card Station III Adaptor.

Important news for all Card Station III users:  
This adaptor allows the use of the Card Station III  
with the Tecra 8000 series.

### CD/DVD Network Dock.

The ultimate solution to link up your Portégé 7010CT to  
your office. The CD/DVD Network Dock comes with a  
CD or DVD drive and connects you to all peripherals.  
And if your Portégé stays overnight in the office, the  
administrator can install the latest software quickly  
and comfortably thanks to the Wake on LAN  
functionality via an Ethernet network connec-  
tion.

### Network Dock.

The Network Dock for the Tecra 8000 series offers more  
than a port replicator. It connects any Tecra 8000 with  
your Ethernet network and enables the use of  
Wake on LAN. Software updates get to your  
computer from the central administrator even if  
you are not present. Thus the Network Dock  
saves you time! It also offers all the benefits  
of a docking unit with all peripherals quickly  
disconnected in one step when you leave the  
office. In no time your Tecra becomes what it is meant to  
be – a mobile computer.

Work has never been presented this well.

# Everything for digital storage.

## Mobile CD/DVD-ROM.

This drive makes the small silver disks not just move, they run extremely fast. Now every notebook can have its own CD/DVD-ROM drive. The universal PC Card interface connects the slim-line 20-speed drive or 2-speed DVD-ROM drive with almost every notebook. In particular when using the Libretto or the Portégé Series, this will open up totally new horizons.

## DVD-ROM drive.

With the 12.7-mm high super-slim DVD-ROM drive, Toshiba brings to notebook computers the DVD drive technology performance previously limited to desktop PCs. This 24x max DVD-ROM drive, which has a data transfer rate of 3,268 KB/s, also performs as a 20x max CD-ROM drive with a data transfer rate of 3,000 KB/s. Toshiba has developed this DVD-ROM drive with emphasis on small size, extremely low weight and low power consumption.

## Digital Camera PDR-M1.

The Toshiba Digital Still camera PDR-M1 will record your favourite photos onto an image sensor containing no less than 1.5 million pixels. Your eyes will be spoiled by a picture rendition comprising as many as 1,280 x 1,024 pixels. Instead of loading the traditional film roll, all you need to do is insert a storage card.

## Digital Camera PDR-5.

Great pictures guaranteed with one of the smallest and lightest digital cameras in the world with integrated flashlight. Weighing only 180 grammes the PDR-5 has a resolution of 640 x 400 pixels. Its 2 MB flash memory will hold up to 40 pictures which can be seen instantly on the built-in 2.5" colour LCD at the back of the camera.

## Digital Camera PDR-M4.

The digital camera PDR-M4 supports a particularly high resolution of 2.14 million pixels. Thanks to the short boot time, the camera is ready to operate a mere 2 seconds after start. In addition, the camera has a USB port and an internal RAM memory of 16 MB. As such, five high-resolution images can be taken per second in burst mode. The user can take photographs like a normal 35-mm camera without having to wait between the individual pictures. Up to 32 photos with a 1,200 x 1,600 resolution can be stored on a 8 MB SmartMedia memory card. The camera comes equipped with an integrated battery and mains cable.

Good connections and the right cards get you further, faster.

# Everything for unlimited communication.

## Ethernet Adaptor Combo.

Pick one of two cards: The high-speed Ethernet PC Card opens up the possibilities of Type 10Base-Tas well as 10Base-2 connectivity. The transmission speed is 10 Mbps. You can also choose to communicate via the optional Fast Ethernet Cable at up to 100 Mbps. It automatically installs at the appropriate speed.

## Token-Ring Adaptor.

The Token Ring PC Card on the other hand offers connections via Type RJ 45m 9-pin D-Shell and supports UTP/STP. Automatic installation at the appropriate transmission rate (e.g. 16 Mbps).

## Global PC Card Modem.

With a V.90-Modem you're always on the hot-line: data transfer at speeds of up to 56 kbps and 14,440 bps for fax transmissions. With the GSM Upgrade Kit you can even send data from your mobile phone, at a rate of 9,600 bps. International data transfers are no problem either – this package operates in over 20 countries. Country-specific installation comes as part of the software. Also with an internal line interface.

## GSM Upgrade Kit.

Let your data do the talking – from your mobile phone. Together with a Global PC Card, the Upgrade Kit gives rapid data and fax transfers via the GSM network at a speed of 9,600 bps. Available for a wide range of different mobile phones.

## Real Port PC Card.

A totally new form factor for the PC Card world. Thanks to its PC-Card Type III design it allows direct connection using a standard RJ-45/RJ11 cable. The Real Port PC-Card is available as a combined card Real Port Ethernet and 56 k Modem GSM – upgradable to ISDN.

# Everything for life at full charge.

## Battery Recharger.

For even greater flexibility, the high-speed battery charger keeps you going, quicker. Thanks to the electronic regulator it's impossible to overload the battery cells, so you always get the maximum energy from your batteries.

## Battery/SelectBay Battery.

Batteries are the powerhouse of any notebook. The reservoir of energy that gives you the independence to work mains-free. And now, when you need even more power, all you need to do is to slip in the additional battery or a high capacity battery. Either by swapping over with your current battery or – in the case of some Toshiba models – by making use of the SelectBay. Our notebooks are powered by the latest in battery technology: lithium-ion. They're environmentally friendly and keep your notebook working for longer.

## Universal Adaptor.

For notebooks without an integrated adaptor. Extremely small and light. This adaptor works world-wide and adjusts automatically to different voltages (110 V/220 V). The various mains cable connections come as standard.

## Car Adaptor.

Wherever you are when you're out on the road, you can keep on working. The solution is simple: a car adaptor that plugs into the car's cigarette lighter bay: you can recharge your batteries or simply continue working, without having to use your battery power.

# Everything safely stowed.

## Toshiba Backpack.

This robust nylon backpack allows you to have your notebook with you wherever you go and want to have your hands free! Provided with an extra cushion for comfortable "back-packing", it offers plenty of compartments for your notebook, accessories and documents.  
Dimensions: 420 x 320 x 130 mm.

## Madrid Case.

1 carrying strap, 1 inner pouch for notebook, 1 external pocket for documents: smart material that's soft as silk, but extremely durable.  
Dimensions: 350 x 290 x 60 mm.

## Libretto Leather Case.

Another stylish leather case for your Libretto and accessories like an additional high-capacity battery. The internal pocket provides room for small documents and business cards.  
Dimensions: 285 x 240 x 50 mm.

## Portégé Leather Case.

The design and optimised form-factor of this valuable leather case fits in perfectly with the Portégé Series. The padded sides on the leather case provide the notebook with optimum protection. Its exclusive slim-line design distinguishes it from other notebook cases and underlines the exclusive shape of your Portégé.

## Koskin Case.

The "executive" Koskin Case not only perfectly protects your notebook and accessories but at the same time combines clever mobile functionality with attractive design, quality and elegance at an entry level price!  
Dimensions: 380 x 310 x 120 mm.

## Solid Case.

The ideal all-purpose case for any notebook. With its special cushions it gives optimal protection to your computer. Many compartments offer room for accessories and papers. This case is a great all-round companion.  
Dimensions: 350 x 290 x 160 mm.
